675 Enumeration Areas (EAs) Selected
(Two−stage stratified cluster sampling frame)
674 EAs Successfully Surveyed
(237 Urban EAs and 437 Rural EAs)
*1 rural EA omitted due to flooding
30,330 Households Sampled (25,481 Interviewed)
30,078 Ever−Married Women Aged 15–49 Years Interviewed
8,784 Under−Five Children Born
(Live births in the 5 years preceding the survey)
Final Analytical Sample: N = 4,087
Children aged 0–59 months with complete anthropometric & covariate information
(Nested in 3,474 households across 670 clusters)
Excluded (n = 4,697):
• Deceased children: n = 276
• Missing/not measured anthropometry (non−subsampled/absent): n = 4,421
• Flagged/implausible Z−scores: n = 0
