675 Enumeration Areas (EAs) Selected
Two−stage stratified cluster sampling frame across 8 administrative divisions
674 EAs Successfully Surveyed
237 Urban EAs and 437 Rural EAs (1 rural EA omitted due to flooding)
30,330 Households Sampled (25,481 Occupied Households Interviewed)
30,078 Ever−Married Women Aged 15–49 Years Successfully Interviewed
8,784 Under−Five Children Born
Live births to interviewed women in the 5 years preceding the survey
Final Analytical Sample: N = 4,087
Children aged 0–59 months with complete anthropometric & covariate information
(Nested within 3,474 households across 670 clusters)
Excluded (n = 4,697):
• Deceased children: n = 276
• Missing / unmeasured anthropometry: n = 4,421
• Flagged / implausible Z−scores: n = 0
